

Personal Data Collection

A sample template to demonstrate prefilling and collecting information using RSign.

Purpose of this example:

- 1 – Prefilled:** The two text elements will be provided by the backend. These fields must be write-protected. It could also be used for prices, dates, etc.
- 2 – Prefilled & editable:** This text element will be provided by the backend as well, but it can be modified by the user. Use cases is when a backend information needs being correct.
- 3 – Editable:** Long text, empty by default.
- 4 – Editable:** Entry text fields for the user.
- 5 – Selectable:** Drop down list control and a vertical radio button control.

	CustomerNbr RO , labelControl	ContractNbr RO , labelControl
1	CustomerNbr	ContractNbr
	CustLongString1 RW , textControl	
2	CustLongString1 could be prefilled, but isn't when manually processed.
