Personal Data Collection

A sample rule to demonstrate prefilling and collecting information using RSign.

Purpose of this example:

- **1 Prefilled**: The two text elements will be provided by the backend. These fields must be write-protected. It could also be used for prices, dates, etc.
- 2 Prefilled & editable: This text element will be provided by the backend as well, but it can be modified by the user. Use cases is when a backend information needs being correct.
- 3 Editable: Long text, empty by default.
- 4 Editable: Entry text fields for the user.
- **5 Selectable**: Drop down list control and a vertical radio button control.

	CustomerNbr RO, labelControl	ContractNbr RO, labelControl
1	CustomerNbr	ContractNbr
	CustLongString1 RW , textControl	
2	John the Signer entered this text as (ustLongString1
